What is Shell Unleaded 91 Low Aromatic fuel?

Shell Unleaded 91 Low Aromatic is unleaded petrol which complies with the Australian Fuel Quality Standards Act and which has an octane rating of 91 (the same as regular unleaded fuel). It has been specially designed to contain low levels of aromatic compounds such as benzene, toluene and xylene.

Can I swap/mix between regular unleaded fuel and Shell Unleaded 91 Low Aromatic fuel?

Yes. Shell Unleaded 91 Low Aromatic can be used in place of regular unleaded fuel or other low aromatic fuels which are a substitute for regular unleaded fuel. Importantly, because it has a 91 octane rating, the same as regular unleaded petrol, these fuels can be mixed in your petrol tank and it will not affect your vehicle's performance.

Can I use Shell Unleaded 91 Low Aromatic fuel in my car/bike/boat/small engine?

Yes. Shell Unleaded 91 Low Aromatic fuel can be used in place of regular unleaded petrol in passenger vehicles, boats, bikes and petrol motor 4WDs.

If your vehicle requires premium unleaded petrol we recommend you use Shell Unleaded 95. Shell Unleaded 95 will remain available at Shell Coles Express and Shell branded service stations where currently stocked.

For pre 1986 engines the same restrictions that apply to standard unleaded petrol apply to Shell Unleaded 91 Low Aromatic fuel. If vehicles currently using unleaded petrol require the addition of a valve seat recession additive such as Valvemaster, then the same additive will need to be used with Shell Unleaded 91 Low Aromatic.
